2019-2020 ACT ENVIRONMENT GRANTS PROJECT EVALUATION AND FINANCIAL REPORT

Project Title:	Piney Creek Restoration and Woodland Connection				
Grant Recipient:	Molonglo Conservation Group				
Project Officer:	Karen Williams	Phone No.	0427 803 896		
Mailing Address:	Molonglo Conserva	ation Group			
	12 River Street, Oa	ks Estate, ACT 2	2620		
Email Address:	President@molong	glo.org.au			

Project reporting against the Project Plan, outcomes and Approved Budget is a requirement of Item 3 Schedule 1 of the Deed of Grant.

All information in this report is public information, except for all personal and financial information which will remain confidential. If any other information is commercial-in-confidence, please attach as a separate page to this report and mark it accordingly.

In filling out this form please attach any supporting documentation, or additional pages, if more space is required. Please ensure all attachments are clearly marked with the question number they refer to.

Project Report

1. Please summarise all project activities in relation to the Project Plan, describing how they were carried out. Attached before and after photographic evidence to support your summary for all on-ground works.

Assessment of site for Aprasia habitat was undertaken prior to work starting.

Piney Creek Exclusion Fencing

950 metres of stock exclusion fencing was constructed in second half of 2019 along Piney Creek. A contractor erected 8 wire fences, 3 gates and 1 Flood gate.

Exclusion fencing of large paddock tree

Exclusion fencing was constructed in a rectangular shape, starting around the dripline of the tree with the longer section of the rectangle running South to South-East in the direction of the prevailing wind. A Two-person petrol auger was used to dig holes for galvanized steel posts with connection brackets. Star Pickets and manually strained wire used for the fencing of paddock tree surrounds. (An after photo was not taken but the work was sighted by me and the team of rangers that accompanied me on the site visit in June 2023).

Revegetation

Planting commenced in May and June 2020 after completion of fencing. Holes were drilled by petrol auger and mattocks used to create well. Water crystals were placed in holes prior to planting 400 pre-soaked tube stock (list attached). Corflute guards with stake facing prevailing wind were placed around tubestock. Minimum 5L of water was used to water plantings. In-stream revegetation was carried out in active erosion zones and targeted pools of water. Flowering species were clustered in small groups.

Erosion Control

PCS planned to hand-build a rock structure in a suitable area of Piney creek. They planned to build a convex rock structure against the flow of water. The rocks were dumped at the determined location, but the PCS rangers accompanying me on my inspection in June 2023 say that it rained the day they intended to build the structure and it wasn't completed. I noted that the rocks are still in the creek bed but have not been formed into any sort of planned structure.

Revegetation Maintenance

On-ground project-works and follow-up maintenance were completed in October 2020. Most tree guards were collected during an inspection of the new fence in October 2020, with weeding around planting stock and re-staking of some plants done, where necessary.

Wet conditions since then till June 2023 have clearly assisted maintenance of plantings and natural regeneration since. However, my site visit accompanying PCS rangers in June 2023, prior to writing this report, revealed that the fenced stock exclusion areas along Piney Creek have not been properly managed or maintained by the lessee or Parks and Conservation.

Gates were being left open and, in one instance, missing its fastening. In addition, the flood gate and posts has been damaged during more recent deluges and have not been repaired. Although, a dead wild pig left lying on the creek bank provided evidence that the site had been included in the recent aerial pest animal culling conducted by PCS.

Monitoring

Monitoring of planting was conducted in October 2020 but filing of results was not completed due to the disruption to business activity when Molonglo Consulting being placed into voluntary receivership. The information has subsequently been lost.

Despite apparent poor management and maintenance of stock exclusion areas along Piney Creek since 2020 I estimate that approximately 30 to 50% of the 400 plants survive in June 2023, with some strong regeneration of vegetation in wetter areas in and along the creek.

One of the open gates, the water trough (marked in blue on the map, above) can also be seen through the gate opening.

I've attached other photos showing fencing and planting results in the overall area taken in June 2023.

2. Actual Start Date: August 2019

Actual Completion Date: October 2020

- 3. Has this project achieved the activities and milestones by the key dates stipulated in the Project Plan?
 - Yes □ No If no, in what ways did it vary and why, indicating if a project variation was approved by the Grants Administrator?

Project Evaluation

4. Outline the main achievements in relation to the objectives for the project.

The construction of approximately 950 metres of stock fencing along the creek line provided an area of 11.7 hectares to exclude stock grazing along a corridor either side of Piney Creek.

400 native tube stock were planted to increase landscape connectivity of the local Yellow-Box Red-Gum Grassy Woodland community, enhance suitable habitat for native species and mitigate active creek erosion with the inclusion of in-stream vegetation. (Species list attached)

Two paddock tree enclosures were erected to improve the connectivity of two existing remnant mature hollow bearing Eucalypts to the revegetation site and the Molonglo River Corridor beyond.

5.	Did the project achieve the desired outcomes?	Yes	🗖 No
•••			

Help enhance an endangered ecological community and mitigate the negative impacts of historical farming practices in an achievable manner.

The project site is located between existing areas of Yellow-Box Red-Gum Grassy Woodlands habitat, identified Pink-tailed Worm-lizard (Aprasia parapulchella) habitat and the Molonglo River Corridor. The addition of minor fencing and revegetation works along Piney Creek has provided landscape scale improvement by connecting the remnant grassy woodland ecological community with the revegetation site. In addition, two isolated remnant paddock trees were enclosed to prevent stock from further impacting the root structure of the trees and to improve ground and middle storey habitat regeneration beneath the tree canopies. In 2023, survival of plantings mixed with naturally regenerating native species has increased the potential for improved connectivity across historically and currently grazed open paddocks to to adjacent remnant grassy Woodland habitat. (photos attached)

Protect habitat for a locally vulnerable species and will also increase habitat and food sources for native species in the future.

Aprasia are known to live happily with 15 different species of ants and one species of termite. The most important thing has been to leave the Aprasia alone. Secondly, excluding stock has improved soil quality and subsequently, the natural regeneration of the existing seed bank. Planting has helped absorb and retain water, which has been beneficial to the natural regeneration of open spaces and under tree canopies and supported new plantings. Thus improving the host Grassy Woodland community.

Aprasia is a landscape conservation species typically associated with the fringes of grassy Yellow-Box, Red-Gum Woodland community. Therefore, project efforts focused on improving the condition of the landscape community supporting the habit of the Aprasia, not on the species itself.

The aim was to keep the environment intact by excluding stock grazing in critical areas or by treating areas where disruption had occurred. This was done by planting enclosed pockets of native species to provide seed banks, stepping stones and corridors linking remnant areas; discouraging the spread of weeds through treating priority weeds and encouraging regeneration of native grasses and understorey; and reducing erosion and water quality in the creek line.

The slower water flow rate has itself encouraged the survival of plants instream, with revegetation acting as a filter as well as slowing the rate of waterflow. The reduced exposure of bare soil due to instream revegetation within the project site has greatly reduced erosion of the creek line during recent inundation. (Photos attached)

6. Were there any difficulties or impediments encountered and, if so, how did they influence the outcomes?

Fencing was done during the winter of 2019 and early autumn months of 2020. However, the extreme conditions of the 2019-20 summer meant that planting was delayed till Autumn 2020 to ensure a good survival rate of plants.

Monitoring records were not filed at MCG due to the disruption by Molonglo Consulting being placed in voluntary receivership. In addition, poor management and maintenance by PCS and rural lessee after the completion of the project has made it difficult to estimate the initial survival figures out of 400 plants. In June 2023, I estimate that about 30-50% of plants still survive. The rangers stated that the outcome was "more positive than they had been expecting".

COVID policies meant that engaging the community in plantings was abandoned. This did not affect planting works being carried out in appropriate conditions. However, this will mean that it will be difficult to establish a stewardship group to help with long-term maintenance.

7. Outline any action taken to remedy difficulties or impediments encountered and/or improve the project outcomes.

Plantings were conducted by MCG staff when COVID policies put a stop to community participation.

Project work was completed three months outside the original project time frame (in October 2020). However, reporting of the project could not be completed until the project could be financially reconciled. Two consecutive variations were sought and granted once it

was realized that MCG required more time to confirm its reconciliation of outstanding projects following the placement of Molonglo Consulting into voluntary receivership.

8. What have you or your organisation learnt from this project?

We have learnt that, despite MCG's best efforts, the full commitment and ongoing participation of all stakeholders connected to the project is vital to achieving the best long-term results.

9. Do you or your organisation have any plans to continue, monitor or further develop this project beyond the funded period?

Not immediately. There is the potential to do follow-up work on the site but, given the current poor management of the site and the lack of long-term community stewardship, I don't believe further work would be viable. It would be good to reconsider the situation once the distance of the site from Denman Prospect diminishes as the development of the area continues and residents become more settled and connected to their surrounding environment.

Products of the Funded Activity

10. Has the project produced any documents, brochures, books, articles, newsletters, other artistic works or literary works or advertising?

□ Yes ■ No If yes, please provide a list of material and include the items with this report, attached if possible.

11. Has any statistics been collected in the course of the project?

If yes, please attach material to this report.

Financial Report

12. In accordance with Item 3 of Schedule 1 you are required to complete a financial statement and certify Grant expenditure. Please complete the financial statement of all actual expenditure for the Funding Activity, including government, non-government and private, as well as any in-kind contributions. Documentary evidence substantiating this financial statement must be attached to the report.

I have acquitted this grant as discussed with ACT NRM (Brian Butler-Kemp) in 2023. In keeping with current reporting requirements to provide proof of delivery it was agreed that evidence of expenditure, given the circumstances, was not necessary. (See Acquittal Form (attachment 1)). I have, however, provided invoices to the value of \$24,513.92 that are reliable supporting evidence of third-party involvement in delivering the project. Time

* MCG disputes the value claimed by Molonglo Consulting in their invoices. However, this is part of an over-arching dispute between the two parties and there is no dispute that the work in question was done at this site.

Please attach documentary evidence substantiating this financial statement.

- 13. Indicate the total Grant received for this project. \$34,990.00
- 14. Indicate the amount of unexpended Grant (if any). \$0If the Grant was not expended in accordance with the Deed please provide an

explanation.

The grant has been fully spent and all project work was completed. However, MCG is unable to provide full documentary evidence of expenditure. Refer to explanation on the project acquittal form.

Certification of Financial Statement and Acquittal

15. Certification by the signatory to the Deed of Grant for the Funded Activity.

I/We __Karen Williams_ (name) of _Molonglo Conservation Group(organisation)

certify that all information in this report is complete and correct in accordance with the Deed of Grant for this project.

I am aware that:

- 1. Action may be taken to recover any Grant payment made where the funds received are not used entirely for the purpose(s) for which it was approved.
- 2. Any unspent funds from the Grant payment must be returned to the ACT Environment Grants unless alternate arrangements have been made with the Grant Administrator.

Kwill.
